How to Collect a Hair Sample

Pulling hair is very easy.
Pull 40-50 hairs from the horse's mane, by the roots, from the withers. **DO NOT** touch the roots. Twist 20, or so, hairs around a finger, about an inch away from the skin and pull straight out. Repeat the process, if needed. **DO NOT CUT THE HAIRS FROM YOUR HORSE!**
Handle the hairs by the shaft. Long shafts of hair are not necessary, as DNA is extracted from the roots. For very young foals, hair from the tail is preferred, as it has larger root bulbs.
.

To order DNA markers, please enclose $65, made payable to Heritage Horse International
(This price includes one conversion fee) Your horse's DNA will be on file so the foals can be registered with FHH.
Stallions will be added to our On File DNA list on our website.

DO NOT PUT HAIR IN A PLASTIC BAG OR SEPARATE ENVELOPE

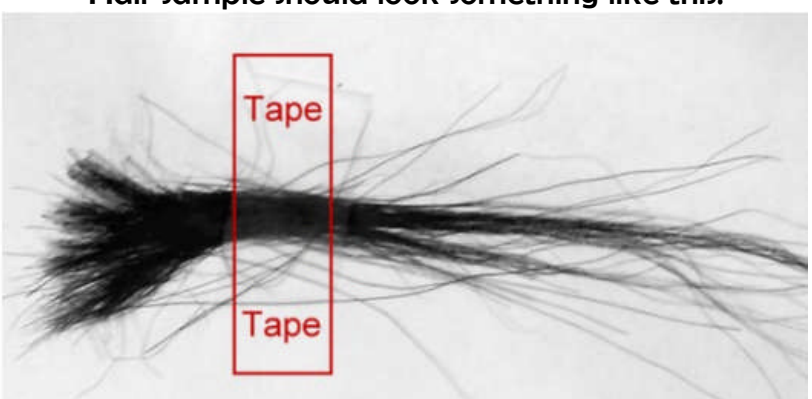
SEND A COPY OF THE PAPERS

Tape hair on the back, in the middle of this paper and fold the paper in thirds around the hair.

FOLD BACKWARDS HERE----------

Pull from the withers, like this:

Hair sample should look something like this:



Mail hair to: Friesian Heritage Horse ~ 1266 150th Avenue ~ Ogilvie, MN 56358
